HTTP CRUD Task

1. Integrate HTTP Client concepts with the Router app which you have done already for the Routing Task.

2. Endpoints are explained below. you can use HTTP Client methods to make the async calls.

3. You'll get a token from the login api response after logged in, use that in the CRUD operation API's.

Signup - http://node.mitrahsoft.co.in/register
Method: POST
body: {
   first_name: ",
   last_name: ",
   email: ",
   password: "
}

Login - http://node.mitrahsoft.co.in/login
Method: POST
body: {
   email: ",
   password: "
}

Get all users - http://node.mitrahsoft.co.in/users
Method: GET
